

MH222-XXX

2.2" CHARACTERS | 2.5" ARROW

MICRO COMM

REMOTE DISPLAY INDICATOR "RDI"

Segmented LED, digital indicator for floor position display, as well as car direction. Any alphanumeric character can be displayed in either single or double digit designations.

TYPICAL APPLICATIONS:

- > Car-OP Panel
- > Transom-car or Hall
- > Surface mount fixtures

FEATURES:

- > Ultra-thin package
- > Fast 3-wire hookup
- > Latched inputs
- > Cross wire protected
- > Self testing
- > Alternate message
- > Passing chime output
- > Error detection and correction

METAL (options):

- > 70100006
- > 70100007

NOTE:

1. This is not a stand alone unit. Must be used in conjunction with a Micro Comm interface.

REMOTE DISPLAY INDICATOR "RDI"

Segmented LED, digital indicator for floor position display, as well as car direction. Any alphanumeric character can be displayed in either single or double digit floor designations.

Typical Applications:

- Car-OP Panel
- Transom-car or Hall
- Surface mount fixtures

Features:

- Ultra-thin package
- Fast, 3-wire hookup
- Latched inputs
- Cross wire protected
- Self testing
- Alternate message
- Passing chime output
- Error detection and correction feature

The Micro Comm driver must be programmed to send messages with the level required to activate the features listed below. Level 0 messages will always be displayed, regardless of DIP switch or resistor settings.

For message blocking, turn on DIP switch 1 (MB). This will block level 1 and level 3 messages from being displayed.

To blank the display during a fire main (level three) message, turn on DIP switch 2 (FM).

To blank the display during a fire alternate (level two) message, remove resistor R5 (FA) from the board.

DIP switches 3-8 off and resistor R4 (64) installed is an all call using travel signals. DIP switches 3-8 on and resistor R4 (64) removed is an all call using arrival signals.

All MH222 displays are able to operate in arrival mode. Use the chart above to set the dip switch to the desired floor. The Micro Comm driver must be set up properly to send arrival information.

To use the MH222 as an arrival unit above floor 63, remove resistor R4 (64) from the board and set the DIP switches as shown on the chart, adding 64 to the floor number shown. For example, to set the MH222 for floor 75, remove resistor R4 and set the DIP switches for floor 11 (64+11=75).

To operate the MH222 as a rear unit remove resistor R3 (R) from the board. NOTE: The Micro Comm driver must be sending the MC2000 data stream to use this feature. Call Tech Support at 419-636-6705 for more information.

NOTE: MUST BE USED WITH A CLASS 2 POWER SUPPLY.
