MINI PI

5.7" Mini PI

The Mini PI is a flexible position indicator which can be customized for any building or corporation. This customization can reflect architectural elements, color schemes, and corporate identity. Within this customization, information can be presented to passengers regarding the elevator's current position and direction, arrival arrows along with priority messages from the controller. It's also designed to be a destination type display showing floors served when in destination mode. They are full color, have simple voice options and are USB updatable.

These units also have a non-movement blanking to help preserve backlight life.

TYPICAL APPLICATIONS:

- > Car Operating Panel
